

## SIDELINE APS (ADVANCED PLAYER SAFETY)

A GH Imaging innovation the Sideline APS A-frame system was designed to make sideline branding safe, easy, effective and versatile.

### SAFETY WITHOUT THE SAG

The high density, 3-layer, closed cell foam construction makes this system durable and lightweight while being completely safe upon impact. The 3-layer foam construction also means the Sideline APS is rigid enough to keep graphics looking great without the sagging of other padded a-frame systems.

### MODULAR

Sideline APS was designed to be modular. 4ft units can easily be connected together to create any length sideline display.

### EASY TO USE AND STORE

This system is based on our popular Sideline II system and uses the same flat-fold design that makes the Sideline APS easy to set-up and tear down. Once folded the system can be stored in a much smaller area than other padded A-frame systems.

### PRICING
